WHO'S WHO IN AMERICAN EDUCATION (VOLS. I-XV)

Issued in alternate years since 1928, this volume has become a standard reference work in U. S. libraries. The next edition (1953-54) will be published in the Spring of 1954.

PRESIDENTS AND PROFESSORS IN AMERICAN COLLEGES AND UNIVERSITIES

Published in 1935-36. Contains photographs of 4,000 administrators and professors. Now out of print.

PRESIDENTS OF AMERICAN COLLEGES AND UNIVERSITIES (VOLS. I AND II)

Vol. I published in 1933. Vol. II published in 1952. Contains 1450 biographical sketches and 600 photographs of college presidents. Copies available at \$10.00.

LEADERS IN AMERICAN SCIENCE (VOL. I, 1953-54)

First of a series to be issued in alternate years. Price \$12.00 copy, postpaid.

PREFACE

This is the first volume of a biennial series to be known as **LEADERS IN AMERICAN SCIENCE**. Herein we are listing in biographical form, with many photographs, and in name notations, the men and women we believe to be the leaders in scientific work in the United States and Canada.

Like many new ventures, the compilation of this volume has had many difficulties. First, there was the antipathy of many scientists in filling out questionnaires. As a group, scientists are busy people and have little time for such routine tasks. Second, a great many of those receiving questionnaires were rather of the opinion that the distinguished volume, **AMERICAN MEN OF SCIENCE**, was complete and sufficient in the field of biographical science. Third, a few thought of the new **LEADERS IN AMERICAN SCIENCE** as a mere money making scheme. Little did this small group know that the editor was risking \$25,000 of his own money in research, editorial work, advertising, printing, and binding in order to assure the success of the new volume.

We hope you will like this initial **LEADERS IN AMERICAN SCIENCE**. It must be pointed out that every biographical sketch included is written from original data supplied by the biographee. Where only names are listed, we have requested data and have failed to receive them. Most positively, it must be stated that the eminence of the biographee was the reason for the inclusion of sketches and that in no case was a financial motive involved in the inclusion of any biographical sketch.

In the beginning, our plan was to have the scientific societies, associations, and organizations make recommendations for names to be included in the volume. After corresponding with over 600 such groups, we came to the conclusion that these scientific organizations could not be of too much help with the problem. Quite logically, very few were willing to point out their most eminent members. In many cases it would have been obviously impossible; for example, the American Chemical Society has over 63,000 members. We therefore decided to include: (1) all Fellows in national science organizations; (2) all members of the National Academy of Science, Sigma Xi, and a few others; (3) the men and women who were personally recommended by reputable scientists, and, (4) officers in national scientific organizations. In addition, we checked the columns of **TIME** for the past four years for newsworthy names, and the past issues of the **WORLD ALMANAC** for winners of science awards.

All told, we have done everything within our power to include names which will really make this new volume worthy of the title, **LEADERS IN AMERICAN SCIENCE**. This is an original work and no check whatever has been made with the eminent volumes **WHO'S WHO IN AMERICA** and **AMERICAN MEN OF SCIENCE**. No doubt we have unintentionally omitted many, many worthy names. We hope that our omissions will not be too severely criticized in view of the newness of the volume.

One section of which we are very proud is the "Poll of Distinguished Scientists." For many years there has been a need for such a compilation. The outstanding volume, **WHO KNOWS—AND WHAT**, approached this problem on a more inclusive basis. The purpose of our compilation is to list the opinions of the scientists themselves as to the most distinguished men and women in their own specialized fields. To obtain this information, we sent out over 50,000 questionnaires to every conceivable kind of scientist. From these we obtained over 2400 recommendations. If a scientist recommended himself (and some did), we discarded the questionnaire. Some men and women were recommended by as

many as twenty people. Our first inclination was to star the leading person in each specialized field. We found this procedure to be impractical because of the small number of recommendations in highly specialized fields. Again, this list of distinguished scientists is not of our choosing; it is based on the choices of thousands of reputable scientists who themselves did the choosing. In order to check the complete compilation, we sent out the list in mimeographed form to hundreds of scientists and asked for criticisms on those included and suggestions for additional names. All of these suggestions are reflected in the final published list included in this volume.

We are often criticized for the inclusion of pictures in our biographical volumes. Personally, we feel this is one of the most valuable features of the volumes. Suppose you want to meet a stranger, Dr. X, at the A.A.A.S. meeting. What better introduction could you have than a picture of him together with his biographical material? Others scoff at pictorial biographical volumes as being *vanity* volumes. This might be true of some in the past. WHO'S WHO IN CANADA uses pictures and our policy will be to continue the publication of as many pictures as possible.

Some data not easily available from other sources are included in LEADERS IN AMERICAN SCIENCE. This includes the main field of specialization, certain personal data, war record, and several other items of interest.

Will LEADERS IN AMERICAN SCIENCE be continued as a publication every other year? This question will be answered in the main by those who find it to be a worthwhile and useful volume. It should have great use in college, public, business, and industrial libraries for reference. The editor will welcome frank appraisals of the volume for both present and future use. The area of science is a constantly changing field and some attempt should be made at frequent intervals to seek out the hundreds of younger men and women who are deserving of recognition for teaching, research, and other achievements in the science fields.

We wish to thank the hundreds of scientific men and women who have been helpful through recommendations and suggestions. The editor is a busy college president (and not the eminent geneticist of the same name, as some would think) and he is indebted to his associate editor, Miss Eleanor Carroll, and to his editorial assistants, Miss Mary Armstrong, Mrs. Betty Hall, Miss Jean Claire Jones, and to Mrs. Aileen Butler, for diligent work in making this volume possible.

S., whereby substantial economies were effected; (c) chemical rsch. and the outlining of reliable testing techniques for the control of working cyanide solutions; (d) plant and laboratory investigations that resulted in important finds on the influence of colloidal clays in mining and cyaniding operations; (e) rsch. on the physical and physico-chemical reactions involved during the so-called precipitation of gold from auriferous cyanide solutions by means of charcoal, with evidence that the reaction was an example of adsorption and not caused by occluded carbon monoxide gas, as had been generally believed, a discovery that suggested more efficient and more economical methods of application; (f) development of the Allen process in the treatment of Chilean caliches for the recovery of nitrate, with iodine and potash by-products, by the introduction of a modified hydrometallurgical technique and involving the provision for the deposition in the leaching charge of a water-soluble filter aid, in this instance sodium chloride, thus permitting the successful beneficiation of a highly refractory raw material; this process was sponsored and adopted by the du Pont Co. and used for the treatment of ores in the Taltal pampa until the exhaustion of reserves (U. S. patent); (g) exploratory work on a petroliferous mineral in Neuquen Providence, Argentina, leading to underground development, with extensive, physical, chemical and electrical testing and analysis, the naming of the mother mineral as Neuquenite and its classification, commercial exploitation and utilization as a new type of glance pitch; and the application of the oxidized capping and vein-wall material as a boiler fuel. Author: Operational Circuit Analysis, 1929 and many technical articles, and the co-author, with Wm. Henry Timbille, of Principles of Elec. Engrng., 1922; A collection of his papers and addresses was issued in 1946, under the title Endless Horizons, with a foreword by the late Frank B. Jewett; most widely known publication is Modern Arms and Free Men, a discussion of the role of sci. in preserving democratic institutions, which was the Book of the Month Club selection for Dec., 1949. War Record: Comm. as Lt.-Comdr., U. S. Naval Reserve, 1924-32; At the outbreak of World War II, while still retaining his position with the Carnegie Institution, he was appointed by the Pres. of the U. S. as Chmn. of the Natl. Defense

Rsch. Com., a governmental agency established for the purpose of supplementing the work of the Army and Navy in development of devices and instrumentalities of war; Dir. of the newly established Office of Scientific Rsch. and Development charged with the duty of mobilizing the scientific effort of the country, of initiating in co-operation with the Army and Navy broad programs of rsch. where needed, of advising the Pres. as to the status of scientific rsch. and development in their relations to defense, and of continuing rsch. on instrumentalities and materials of war and in the field of med.; continued in this post until the OSRD concluded its activities in Dec., 1947; The Natl. Defense Rsch. Com. and a newly formed Com. on Med. Rsch. constituted the two major divisions of the Office; various other scientific agencies of the Govt., notably the Natl. Advisory Com. for Aeronautics—of which Dr. Bush was a member to 1948, serving as Chmn. in 1939-41—as well as the Natl. Acad. of Sci., the Natl. Rsch. Council, and rsch. labs. of ednl. and industrial organizations throughout the country worked in close collaboration with the Office of Scientific Rsch. and Development from its inception; in his capacity first as Chmn. of the NDRC and then as Dir. of OSRD, Dr. Bush was a central figure in the development of nuclear fission culminating in the utilization of atomic bombs to bring the war to an end; his official connection with the project began in June 1940, when the earlier constituted Uranium Com. was made a sub-committee of the newly created NDRC; Decision for an all-out effort in the undertaking was reached after the research had progressed satisfactorily and various administrative reorganizations had been made, so that the difficult question of allocating men and materials in a period of natl. emergency could soundly be answered; interestingly, the decision was announced to those concerned on Dec. 6, 1941; Dr. Bush, as a mem. of the Top Policy Group headed by the Pres. and as Chmn. of the Military Policy Com., shared responsibility for the determination of policy throughout the program, continuing in this work after the task of administration and development had been taken over by the Army in 1943. Pres. Roosevelt in the fall of 1944 called on Dr. Bush for recommendations on ways whereby the lessons learned through the OSRD in time of war might be applied in time of peace “for the improvement of the Natl. health, the creation of new enterprises bringing new jobs, and the betterment of the national standard of living.” Dr. Bush prepared a report, issued in July, 1945, under the title “Sci., the Endless Frontier,” which drew on studies made by four committees of eminent scientists, engineers, and educators, and made specific proposals for the consolidation and utilization of the scientific skill of the nation for the general good, which were reflected in legislation considered by the Congress. Mem.: President’s Rsch. Bd. In July, 1946, appointed Chmn. of the Joint Rsch. and Development Bd. of the War and Navy Depts. to carry out “a strong, unified, integrated, and complete rsch. and development program in the field of natl. defense.” Passage of the Natl. Security Act of 1947 replaced the JRDB with the Rsch. and Development Bd. of the Natl. Military Establishment; served from Sept., 1947 to Oct. 15, 1948, as the first chmn. of this organization. Gen. Int.: Dr. Bush has received patents on gaseous-conduction devices and on cathode arrangements and coatings for grid-controlled arcs. His inventive interests have for years been focused on the application of mechanical and electronic means to reducing the burden of computation, calculation, and repetitive routine on man’s intelligence. One expression of this desire is the network analyzer which, with staff members of the Dept. of Elec. Engrng., he developed at the Mass. Inst. of Tech. in the late 1920’s. This is an electric network on which can be set up the electrical replica in miniature of large and important electrical power systems, for the purpose of investigating their performance under stress. Another and more important result of Dr. Bush’s interest in apparatus to free man’s intelligence for creative effort is the differential analyzer, construction of which began under his direction at the Mass. Inst. of Tech. in 1935, and which is a radically different and improved advance over the first machine of the sort, which he developed there in collaboration with the electrical engineering staff in 1930. The new machine, weighing 100 tons, combined some 2,000

electronic tubes, several thousand relays, about 150 motors, and nearly 200 miles of wire to provide solutions of the differential equations expressing mathematical problems involving as many as 18 variables. Problems in atomic physics, acoustics, ballistics, structures, and electrical machine transients are representative of the tasks for which the analyzer is designed. Other devices such as the rapid selector which scans and selects wanted items from microfilm and the justifying typewriter which produces typescript with an even right-hand margin in one operation, have resulted from Dr. Bush's inventive interest in making machines do more of the pseudo-intelligent work of the world. In the "Atlantic Monthly" for July, 1945, he wrote speculatively and fancifully of a hypothetical machine called the "memex" which utilizing components of this sort, would serve as an extension of man's memory, bringing wanted items before him on a viewing screen by means of an associative index, and permitting him to review at the touch of a finger all his accumulation of data on a desired subject. Awarded the Louis Edward Levy Medal by the Franklin Inst. in 1928 for his work on analyzing devices and the Lamme Medal in 1935 from the Amer. Inst. of Electrical Engrs. for "his development of methods and devices for application of mathematical analysis to problems of electrical engrng." He was also granted the Research Corp. award made by Columbia Univ. in 1939, and the Ballou Medal by Tufts Coll. in 1941. The Edison Medal of the Amer. Inst. of Elec. Engrs. and the Holley Medal of the Amer. Soc. of Mechanical Engrs. were awarded him in 1943, and in 1945 he received the Gold Medal of the Natl. Inst. of Soc. Sci. for distinguished service to humanity, the Roosevelt Memorial Assn. Distinguished Service Medal, and the Marcellus Hartley Public Welfare Medal of the Natl. Acad. of Sciences. The Washington Award was presented to him in 1946 by the Western Soc. of Engrs.; in Jan., 1947, the Hoover Medal for 1946 was awarded by the Amer. Inst. of Elec. Engrs., the Amer. Soc. of Civil Engrs., and the Amer. Inst. of Mining and Metallurgical Engrs., and the Amer. Soc. of Mech. Engrs. to him as an "engineer, educator, and administrator, who, in critical time of need, was in a most special sense an organizer, guiding spirit, and driving force of the nation's achievements in physical and medical science." The Distinguished Service Medal of Tufts Coll. came to Dr. Bush in June, 1947; on Feb. 11, 1948, he was made Knight Commander of the civilian division of the Most Excellent Order of the British Empire, and on May 27 of that year he received the Medal for Merit with bronze oak leaf cluster from Pres. Truman in ceremonies at the White House; the medal of the Industrial Rsch. Inst., Inc., was presented to him in Feb., 1949; in Jan., 1951, he received the John Fritz Medal and Certificate for 1951, an award sponsored by the Amer. Soc. of Civil Engrs., the Amer. Inst. of Mining and Metallurgical Engrs., the Amer. Soc. of Mech. Engrs., and the Amer. Inst. of Elec. Engrs.

HANSEN, Max Asmus Karl, Manager, Metals Rsch., Armour Rsch. Foundation, Technology Center, Chicago 16, Ill. **PHYSICAL METALLURGY; NONFERROUS METAL-LURGY**. b. Bremerhaven, Germany, Jan. 27, 1901. s. Maximilian J. C. and Helen M. H. (Petersen) H. Edn.: Ph.D., Univ. of Goettingen, Germany, 1924. m. Mary A. L. Tittel, Nov. 28, 1925. c. Helga H. L.; Dagmar W. K.; Burkhard C. R. O. Exp.: Metallurgist, I. G. Farbenindustrie A. G., Bitterfeld, Germany, 1924-25; Metallurgical Rsch., Kaiser Wilhelm Institut fuer Metallforschung, Berlin, Germany, 1925-33; Metallurgical Rsch., Staatliches Materialpruefungsamt, Berlin, Germany, 1933-34; Chf. Metallurgist, Dir. of Rsch., Vice Pres., Duereiner Metallwerke A. G., Duereen and Berlin, Germany, 1934-45; Prof. of Metallurgy, Technische Universitaet, Berlin, 1945-47; Assoc. Prof. of Metallurgical Engrng., Ill. Inst. of Tech., Chicago, Ill., 1947-49; Sr. Metallurgist, Supvr. of Nonferrous Metals Rsch., Asst. Chmn., Metals Rsch., Chmn. and Mgr., Metals Rsch., Armour Rsch. Foundation, Chicago, Ill., 1949—. Mem.: Deutsche Gesellschaft fuer Metallkunde; Sigma Xi; Inst. of Metals, London; Amer. Soc. for Metals; Amer. Inst. of Mining and Metallurgical Engrs. Author: The Constitution of Copper-Zinc Alloys, with O. Bauer 1927; The Constitution of Binary Alloys, 1936; etc. Contrb. to: Zeitschrift fuer anorganische Chemie; Speisewasserpflege; Zeitschrift fuer Metallkunde; Jour. of Inst. of Metals, London; Trans. Amer. Soc. for Metals; Trans. Amer. Inst. of Mining and Metallurgical Engrs.; Jour. of Metals. Special Int.: Constitution of Alloy Systems; Trans-

formation Studies in Alloys; Alloy Development; Specialized Knowledge in the Field of Nonferrous Metals, including Aluminum, Magnesium, Copper, and Titanium.

HANSEN, Robert Suttle, Assoc. Prof. of Chem., Iowa State Coll., Ames, Iowa. **PHYSICAL CHEMISTRY (SURFACE CHEMISTRY)**. b. Salt Lake City, Utah, June 17, 1918. s.
